

Unleash your point of sale

Your entire restaurant in the palm of your hand

Problem

In a traditional dining experience, servers make at least three separate visits to the POS system per order. Orders can be delayed, entered incorrectly, and guests can feel insecure when their credit or debit cards leave the table.

Solve

The Mobile Point of Sale dining experience allows orders to be entered immediately and correctly, right at the table. Guests receive food faster and with fewer mistakes. Payments are taken tableside, so the guest feels secure never losing sight of their card.

Key features

- Protect customer data with tableside EMV chip payments and protect your business from fraud with point-to-point encryption.
- A durable, complete handheld point of sale with rich, cloud-based features.
- Switch between English and Spanish with a single touch to give staff and customers an experience tailored to their language preference.
- Increase order accuracy, server efficiency and average ticket.

Key benefits

Turn more tables per shift/day.

Speed up order entry, food delivery and payment time.

Line-bust with ease to quickly reduce crowds in quick-service restaurants.

Increase average check by allowing customers to place appetizer and drink orders quickly and easily.

Fast. Flexible. Secure.

Unlike other handheld restaurant terminals, Mobile POS isn't just a wireless extension of your payment terminal. It's a sleek, durable, fully capable POS system and secure EMV payments device for all styles of foodservice — from food truck and quick-serve to multi-location and fine dining. Get the full functionality of Heartland Restaurant in the palm of your hand, to reduce wait times, create real-time orders and take secure payments tableside.
